

PROJECT FACT SHEET

Navigational Aids Major Maintenance and Renewal

Gold Coast Waterways Authority is performing a major maintenance project on 27 large beacons in the Gold Coast Seaway and the Broadwater. The project involves replacement of ladders, application of anti-corrosion measures and performing blast and repaint activities to extend the operational lifespan of these assets.

BENEFITS

- Sustain safe navigational access in Gold Coast waterways.
- Enhancing the structural integrity of the assets, ensuring long-term reliability and safety.
- Increasing operational efficiency by providing a stable and secure platform for maintenance and inspection activities.

IMPACTS

- Vessel operators will need to exercise caution when navigating through areas of beacon maintenance.
- Maintenance activities may require temporary closures or restrictions in certain areas where navigational aids are being serviced.
- There may be some noise impacts from high pressure blasting works.
